

Take the exact measurements  
and place your order !

Calculate the entire surface area to be covered as shown below.  
Multiply the length by the height to obtain square inches and round up.

**Example:**

Height: Measurement = 29.75"/rounded= 30"

Width: Measurement = 77.25"/rounded= 78"

Surface area: Measurement = 30" x 78"/rounded= 2.340 square inches

**Important**

Do not forget the sides to be covered
